

Why Digital Movement Screens Matter

Seeing movement clearly is the first step to improving it. Digital movement assessments make movement limitations visible, allowing training and care to be guided by measurable data and tracked over time.

ANALYSIS

Sports-Specific

Built for How You Move

We assess movements specific to your sport or activity — running, lifting, golf, tennis, pickleball, throwing sports, and more.

What It Does

Identifies movement limitations that may increase injury risk, reduce efficiency, or affect performance.

Your Plan, Your Sport

Plans tailored around the demands of your activity, not a one-size-fits-all.

ASSESSMENTS

Movement Age

What Is Movement Age?

Your calendar age counts the years you've lived. Movement Age shows how "old" your body is actually functioning — and where it may be falling behind.

What We Measure

Hip mobility and control, strength capacity, spine motion, shoulder and neck mobility — combined into one simple Movement Age score.

What Your Score Reveals

Pinpoints where mobility is restricted, where imbalances exist between sides, and where strength or control may be limiting your recovery.

Your Measurable Baseline

Your first assessment creates a clear starting point — showing how your body moves, where it's tight or weak, and where imbalances exist between sides.

Your results are saved and stored so we can compare them at every visit.

Re-testing measures real change and adjusts your plan as you improve.

This gives us clear proof of progress.

MOVEMENT DATA

Your provider's expertise is supported by measurable movement data, not guesswork.

MEASURABLE RESULTS

Re-testing tracks real change over time and adjusts your plan as you improve.

LONG-TERM MOVEMENT

A smarter approach to care that keeps you moving well for the long run.

A Higher Standard of Care

STARTS HERE

Our clinic uses digital movement technology to deliver measurable results.

Ask your provider about your Digital Movement Assessment.
